

Swing Trading Bulletin

Issue 17,
Market Close,
10th Sept. 2004

NOTE: "SQ" is a market timing system for contrarian "swing traders" (2 weeks to 4 months). It is 100% sentiment and probability based. A unique process of "scoring" various sentiment input indicators derives a bullish probability for the market - SQ. This activates the trading model (above right) at certain trigger points. Contact info@contraquant.com for further information.

Commentary

There was a 50 point gain for the NASDAQ Composite on the week as our SQ measure finally fell to 69% after 5 consecutive weeks above the key 70% level. This suggests that a gradual, well-based bottom was formed in the late summer during which investors worried about technology shares whilst building up their hedges and bearish exposure. This has now set the scene for an autumn rally. We are poised to ride this trend further with our open LONG position currently over 100 NASDAQ Composite points in profit above its average entry level. No action is taken at this stage.

Trading Model Rules

All trades against the NASDAQ Composite or Rydex Velocity 100 Fund (200% leveraged against the NASDAQ 100) and executed either:

- Against the coming week's opening level of the Composite index or Rydex Velocity 100 Fund.
- Via limit/stop orders at a specified level as described in the prior week's report. For the Rydex Velocity 100 Fund trades are executed against the Fund's next day opening price after the trigger level specified on the NASDAQ Composite is touched. Zero transaction/trading costs assumed and no spread. No interest on cash balances.
