SQ INPUTS

The sentiment inputs come from the options market, market surveys, asset allocation and proprietary indicators.

NOTE: "SQ" is a market timing system for contrarian "swing traders" (2 weeks to 4 months). It is 100% sentiment and probability based. A unique process of "scoring" various sentiment input indicators derives a bullish probability for the market - SQ. This activates the trading model (above right) at certain trigger points.

## Commentary

The NASDAQ Composite fell 1.4% on the week thus adding to the profit on our open SHORT position. There is now a little less complacency in the air as SQ has moved up to 44%; therefore we will look to close part of our position or insert trailing stops if the market follows through on its descent next week. Nevertheless it looks like it will take a more sustained drop to shake the overall bullish consensus on Wall Street and we will be happy to watch such a scenario unfold. With volatility still near historic lows we believe that almost any unanticipated external catalyst is likely to trigger a bearish market reaction. We therefore wait and see with interest.

## Trading Model Rules

All trades are against the NASDAQ Composite and executed either:

- Against the coming week's opening level of the Composite index.
- Via limit/stop orders at a specified level as described in the prior week's report.

Zero transaction/trading costs assumed and no spread. No interest on cash balances. All stop and limit orders entered at the next market open on a "good until cancelled" basis; specified order levels correspond to the NASDAQ Composite. Cancellation can take place only within a report such as this. All trades executed at closest exact level (no fractions).

## Current Trades and Open Positions

Trades Executed Last Week:

NONE.

Current Open Positions:

\$US 500,000 SHORT at average level of 2090 (opened on 7<sup>th</sup>, 14<sup>th</sup> and 15<sup>th</sup> February).
