

# Swing Trading Bulletin

Issue 22,  
Market Close,  
15th Oct. 2004

**NOTE:** "SQ" is a market timing system for contrarian "swing traders" (2 weeks to 4 months). It is 100% sentiment and probability based. A unique process of "scoring" various sentiment input indicators derives a bullish probability for the market - SQ. This activates the trading model (above right) at certain trigger points. ## Commentary

There was a modest drop in the NASDAQ over the week of 0.4% causing SQ to tick up noticeably to 68%. This reflects a deterioration of sentiment in the face of worries related to record oil prices and an uncertain US election outcome. Ironically it is just such uncertainties which continue to underpin the market and allow us to remain LONG. Even if there were to be a further pullback in the coming week we are confident that this would be relatively shallow and short-lived. In our view too many market participants remain cautiously positioned for a substantial or sustained drop from current levels at this time.

## Trading Model Rules

All trades against the NASDAQ Composite or Rydex Velocity 100 Fund (200% leveraged against the NASDAQ 100) and executed either:

- Against the coming week's opening level of the Composite index or Rydex Velocity 100 Fund.
- Via limit/stop orders at a specified level as described in the prior week's report. For the Rydex Velocity 100 Fund trades are executed against the Fund's next day opening price after the trigger level specified on the NASDAQ Composite is touched. Zero transaction/trading costs assumed and no spread. No interest on cash balances.
