SQ INPUTS

The sentiment inputs come from the options market, market surveys, asset allocation and proprietary indicators.

NOTE: "SQ" is a market timing system for contrarian "swing traders" (2 weeks to 4 months). It is 100% sentiment and probability based. A unique process of "scoring" various sentiment input indicators derives a bullish probability for the market - SQ. This activates the trading model (above right) at certain trigger points.

Commentary

Despite relatively little movement in the NASDAQ Composite last week, there was a slight tick up in the overall level of pessimism picked up by our model at 61%. This may be a short term bullish sign as it signals that many investors are still on the sidelines despite the firmness of the market. If however there is a speculative pullback and pessimism builds a little more, this might allow us to go LONG.

Trading Model Rules

All trades are against the NASDAQ Composite and executed either:

- Against the coming week's opening level of the Composite index.
- Via limit/stop orders at a specified level as described in the prior week's report.

Zero transaction/trading costs assumed and no spread. No interest on cash balances. All stop and limit orders entered at the next market open on a "good until cancelled" basis; specified order levels correspond to the NASDAQ Composite. Cancellation can take place only within a report such as this. All trades executed at closest exact level (no fractions).
