

Swing Trading Bulletin

Week 232,
Market Close,
24th Oct. 2008

NOTE: "SQ" is a market timing system for contrarian "swing traders" (2 weeks to 4 months). It is 100% sentiment and probability based. A unique process of "scoring" various sentiment input indicators derives a bullish probability for the market - SQ. This activates the trading model (above right) at certain trigger points.

Commentary

Last week saw a further uptick in negative sentiment as the market ended the week lower. The model reading increased to a lofty 90% once again. While our most recent LONG position is now about 10% underwater, the model suggests that this will be recouped relatively fast. It cannot be sustainable for such extreme levels of bearishness to remain in place indefinitely. We are therefore convinced that significant rewards will be won by sitting tight and staying LONG.

Trading Model Rules

All trades are against the NASDAQ Composite and executed either:

- Against the coming week's opening level of the Composite index.
- Via limit/stop orders at a specified level as described in the prior week's report.

Zero transaction/trading costs assumed and no spread. No interest on cash balances. All stop and limit orders entered at the next market open on a "good until cancelled" basis; specified order levels correspond to the NASDAQ Composite. Cancellation can take place only within a report such as this. All trades executed at closest exact level (no fractions).

Current Trades and Open Positions

Trades Executed Last Week:

NONE.

Current Open Positions:

\$US 1,562,070 LONG at average level of 1735 (opened on 13th October 2008).

Current Pending Orders/New Trades:

NONE.
