

Swing Trading Bulletin

Issue 19,
Market Close,
24th Sept. 2004

NOTE: "SQ" is a market timing system for contrarian "swing traders" (2 weeks to 4 months). It is 100% sentiment and probability based. A unique process of "scoring" various sentiment input indicators derives a bullish probability for the market - SQ. This activates the trading model (above right) at certain trigger points. Contact info@contraquant.com for further information.

Commentary

There was a 1.6% move down in the NASDAQ Composite last week. This was reflected in SQ moving back up to 68% from 65% the previous week which gives us confidence in remaining LONG. Whilst it is possible that declines may extend in the short term we are prepared to ride this out having entered the current trade at significantly lower levels. Continued investor scepticism, put buying and bearish asset allocation are all signs from our contrarian viewpoint that the bounce from the summer lows could resume at any moment. Therefore no changes are made to our trading stance for now.

Trading Model Rules

All trades against the NASDAQ Composite or Rydex Velocity 100 Fund (200% leveraged against the NASDAQ 100) and executed either:

- Against the coming week's opening level of the Composite index or Rydex Velocity 100 Fund.
- Via limit/stop orders at a specified level as described in the prior week's report. For the Rydex Velocity 100 Fund trades are executed against the Fund's next day opening price after the trigger level specified on the NASDAQ Composite is touched. Zero transaction/trading costs assumed and no spread. No interest on cash balances.
