NOTE: "SQ" is a market timing system for contrarian "swing traders" (2 weeks to 4 months). It is 100% sentiment and probability based. A unique process of "scoring" various sentiment input indicators derives a bullish probability for the market - SQ. This activates the trading model (above right) at certain trigger points.

Commentary

The final week of the year saw the NASDAQ Composite fall a further 2% which vindicated our decision to close LONGS in the previous week. In calendar 2005 our model posted a +11.4% performance, easily beating the 1.4% advance of the NASDAQ Composite in the same period. This result was achieved despite being parked in cash for 5 full months out of 12 in 2005. Our overall performance is +24% in just over 19 months with no losing trades. We will continue to build on the proven timing accuracy of the model while using our capital more aggressively in 2006.

Trading Model Rules

All trades are against the NASDAQ Composite and executed either:

- Against the coming week's opening level of the Composite index.
 - Via limit/stop orders at a specified level as described in the prior week's report.
- Zero transaction/trading costs assumed and no spread. No interest on cash balances. All stop and limit orders entered at the next market open on a "good until cancelled" basis; specified order levels correspond to the NASDAQ Composite. Cancellation can take place only within a report such as this. All trades executed at closest exact level (no fractions).
