

Swing Trading Bulletin

Week 225,
Market Close,
5th Sept. 2008

NOTE: "SQ" is a market timing system for contrarian "swing traders" (2 weeks to 4 months). It is 100% sentiment and probability based. A unique process of "scoring" various sentiment input indicators derives a bullish probability for the market - SQ. This activates the trading model (above right) at certain trigger points.

Commentary

Being in cash, we were protected from the NASDAQ's steep 4.7% fall last week. Again, it looks like the model did us a service by getting us out of our previous LONG position at a level of 2417. Negative sentiment is again building nicely and we may soon get a further LONG opportunity, with SQ now at 68%. However, we'll await confirmation of a signal before committing any capital.

Trading Model Rules

All trades are against the NASDAQ Composite and executed either:

- Against the coming week's opening level of the Composite index.
- Via limit/stop orders at a specified level as described in the prior week's report.

Zero transaction/trading costs assumed and no spread. No interest on cash balances. All stop and limit orders entered at the next market open on a "good until cancelled" basis; specified order levels correspond to the NASDAQ Composite. Cancellation can take place only within a report such as this. All trades executed at closest exact level (no fractions).
