

Swing Trading Bulletin

Issue 21,
Market Close,
8th Oct. 2004

NOTE: "SQ" is a market timing system for contrarian "swing traders" (2 weeks to 4 months). It is 100% sentiment and probability based. A unique process of "scoring" various sentiment input indicators derives a bullish probability for the market - SQ. This activates the trading model (above right) at certain trigger points. Contact info@contraquant.com for further information.

Commentary

The market ended the week down by just over 1% despite having started off on a positive footing. SQ remained unmoved at 66% as most of our sentiment inputs remained broadly stable. There has still been no significant uptick in bullish asset allocation or speculative call buying that might prompt us to close out LONG positions. In fact, most market commentators remain fairly cautious in the near term suggesting that money remains on the sidelines to provide further steam for the NASDAQ Composite's rally since the summer lows. We therefore firmly retain our open LONG position.

Trading Model Rules

All trades against the NASDAQ Composite or Rydex Velocity 100 Fund (200% leveraged against the NASDAQ 100) and executed either:

- Against the coming week's opening level of the Composite index or Rydex Velocity 100 Fund.
- Via limit/stop orders at a specified level as described in the prior week's report. For the Rydex Velocity 100 Fund trades are executed against the Fund's next day opening price after the trigger level specified on the NASDAQ Composite is touched. Zero transaction/trading costs assumed and no spread. No interest on cash balances.
